To make this program work, you need to have Java installed on your computer and also have the necessary files that come with the program.

1. Go to the folder where the edu.ucalgary.oop package is located using the 'cd' command in your command prompt. Keep the provided JAR files in this folder.
2. Once you're in the folder, compile all the Java files in the package by typing: javac -cp .;junit-4.13.2.jar;hamcrest-core-1.3.jar edu\ucalgary\oop*.java
3. After compiling all the files, type: javac -cp .;postgresql-42.7.3.jar edu\ucalgary\oop\Main.java to compile the main file of the application.
4. Finally, start the application by typing: java -cp .;postgresql-42.7.3.jar edu.ucalgary.oop.Main.
